

Database Integration & Forest Management Study

Description:

This map represents the spatial integration of a PostGIS relational database designed for local park infrastructure and forestry management. The visualized data highlights the intersection of transportation networks with diverse silviculture stands to assist in long-term resource planning.

Disclaimer:

This map and associated spatial analyses represent a simulated forestry management scenario produced using open-source tools (QGIS & PostgreSQL/PostGIS). All results are intended to demonstrate GIS workflow proficiency for professional portfolio purposes.
